

Perfect for Car Dealerships

With budgets shrinking, car dealerships are installing LightBoss[®] units throughout their facilities (show-rooms, service bays, display areas, and automobile lots) to save energy without sacrificing security.

A typical automobile lot installation can work as follows:

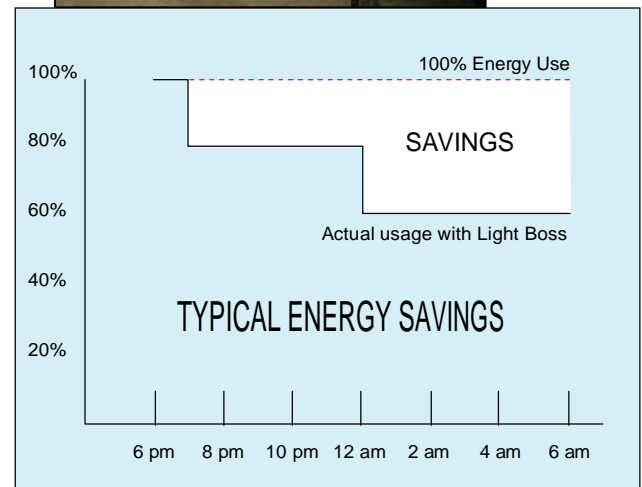

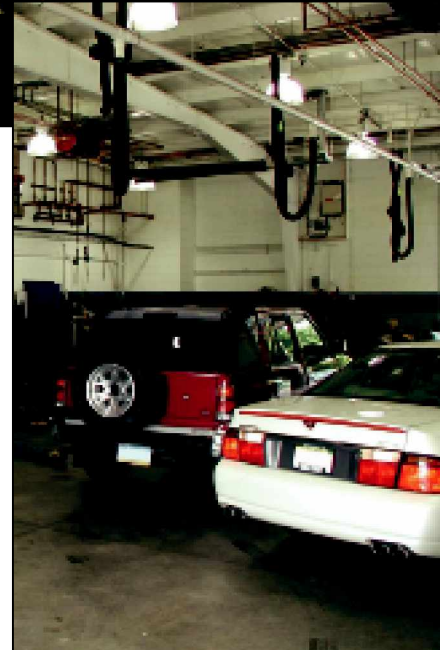

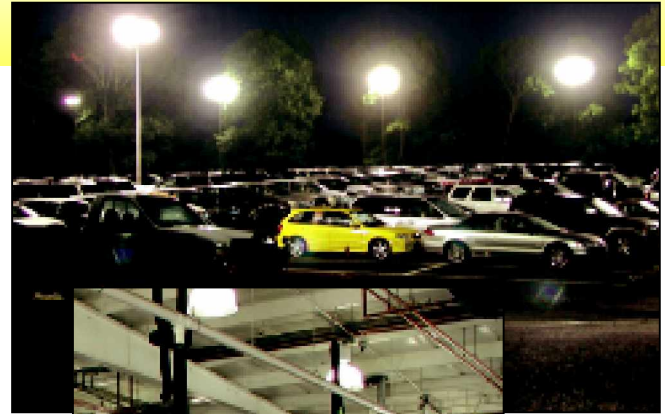

- Photosensor turns lights on at dusk
After warm-up, LightBoss[®] reduces power to the lights 20% (which is undetectable) from dusk until 10:00 pm during business hours
- At 10:00 pm a timer shifts LightBoss[®] to a 40% power reduction for maximum savings during non-use hours
- At dawn, photosensor turns lights off

LightBoss[®] benefits include:

- Complete power level adjustment flexibility
- **Guaranteed energy savings**
- Maintain security – security cameras can still clearly “see” the illuminated areas
- Ease of installation
- **Rapid Return on Investment**

Let us provide a LightBoss[®] Energy Savings Proposal for you!!
